

Hodgson & Hodgson Group Limited

Corporate Profile

Acoustics and Noise Control

Where We Come From

Hodgson & Hodgson has been trading since 1890. It was first incorporated in 1915 under the ownership of brothers William and Arthur Hodgson in Nottingham. After the deaths of the founders, the Company was owned and managed through a family trust up until the mid 1970's, when it was subject to a management buy-out. By the late 1970's Hodgson & Hodgson had become one of the leading thermal insulation fabricators and had a thriving contract installation operation. Under the 'Thermos' brand name, which they still own UK rights to today, the Company manufactured cylinder jackets. They also supplied component insulation packages to the white goods, automotive and railway industries. In 1992 the Company was subject to a buy-in by three of the current shareholders and executives, all of whom had worked for many years with a major mineral fibre supplier.

Over the last decade, Hodgson & Hodgson's business has been strengthened and expanded by the acquisition of a number of Companies, each specialising in different fields. In 2001 the Group became the single trading unit that it is today.

1992	Nevill Thompson Insulation	Exclusive UK agents and manufacturers of ancillary branded building services products
1992	Albion Insulation	Supply of components to the white goods industry
1997	Ecomax Acoustics Alpha dBk	Marketers and manufacturers of branded products and suppliers of specialist bespoke solutions for building and industrial noise control problems
1998	Acoustic Design	Noise and vibration consultancy
1998	EDC Acoustic Engineering	Designers, suppliers and installers of noise control packages for the power generation industry
2000	The Noisco Group Noise Control Products Noise Control Centre	Specialists in acoustic materials and components for original equipment and suppliers of industrial and architectural noise control solutions
2000	Anti-Sonics	Industrial acoustic partitioning and screening
2004	Salex Acoustic Materials	Manufacturers and suppliers of acoustic products to the Architectural and Specialist Vehicle markets

The Group now operates three complementary divisions across eleven locations throughout the UK, Consultancy, Components and Construction and together they represent an unparalleled portfolio which provides Global manufacturers with a "One Stop Shop" for any thermal or acoustic advice, service, product or solution.

What We Do

H&H Components Division

A one stop heat and noise control service to the original equipment manufacturing industry. Working with design engineers, the Division develops prototype and product component packages to reduce noise and heat emissions, both externally and internally. Many buses and trains utilise components manufactured by Hodgson & Hodgson Components Division as do cookers, washing machines, earthmovers, ride-on lawnmowers, prestige motor cars and many many more. Most of the Division's clients operate continuous production lines and these particular demands are met with quality and excellent service.

H&H Construction Division

A one stop noise control service to the building industry. For most standard constructions the Division provides a wide range of branded acoustic products for application to walls, ceilings, floors and building services. Working with architects, acoustic consultants, builders and developers, full technical and specification advice is provided to achieve mandatory or desired performance levels. Buildings with particular requirements, as in the educational, sport, entertainment or health fields are a speciality. Where necessary, bespoke products and installation can also be provided. Industrial buildings often require engineered acoustic treatments such as screens, enclosures, doors, louvres, quiet rooms and test chambers. Hodgson & Hodgson's Construction Division designs, manufactures and installs such tailored products.

H&H Consultancy Division

A one stop shop for acoustic advice and testing. The high degree of competence required in the development and design of Hodgson & Hodgson's products owes much to an investment in highly qualified engineers. The Division offers a service to anyone with a noise problem and its independence and impartiality has brought success to the Group. The scope of work undertaken includes legal representation as professional witnesses, supporting green field development planning, product testing and specification.

General Services

Consultancy - Noise and Vibration

Concept evaluation and specification recommendations, problem solving, research and development, sound measurement and technical analysis, ANC accredited for post-completion sound insulation testing.

Design

CAD analysis, dimensioning, flexibility in material selection, prototyping, patterning, tooling.

Manufacture

Four manufacturing sites, fully equipped engineering shop, flexible and skilled workforce, one off or volume production.

Quality

ISO 9001 and specified customer standards, members of the Institute of Acoustics.

Delivery

Own fleet of vehicles, just-in-time and kan-ban capability, returnable or non-returnable packaging, dedicated export sales function.

Installation

Engineering and architectural expertise, attention to detail, not limited to in-house products.

As a Group, Hodgson & Hodgson likes to believe that there isn't a noise control problem for which it can't provide a one stop shop service. Never complacent, it is constantly adding new products and services to keep pace with the ever changing world.
